

IPS-3106-SE

IPS-3106-SE-PB

Managed Industrial PoE Ethernet Switch

User's Guide

Version: 1.3

Revision History

Version	Date	Changes
1.0	04/19/2018	First release
1.1	06/12/2018	Add new features and CTS branches' contact information.
1.2	09/26/2018	Add the new feature
1.3	05/13/2024	This User's guide is suitable for IPS-3106-SE and IPS-3106-SE-PB since version 1.3.

FCC Warning

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this user's guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at their own expense.

CE Mark Warning

This is a Class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

About this manual

In this user's guide, it will not only clearly introduce CTS IPS-3106-SE and IPS-3106-SE-PB Managed Industrial PoE Gigabit Ethernet Switch but tell you how to install this Switch with detailed instructions.

***NOTE: The following content will be illustrated with the images of IPS-3106-SE-PB, given that IPS-3106-SE and IPS-3106-SE-PB share mainly the same panels and appearances.**

Organization of the Manual

- Chapter 1 “Introduction” describes the features of the Managed Industrial PoE Gigabit Ethernet Switch
- Chapter 2 “Installing the Managed Industrial PoE Gigabit Ethernet Switch”
- Chapter 3 “Operation”
- Chapter 4 “Maintenance”

1

Introduction

CTS's Managed Industrial Switch is designed to meet the emerging FTTX & Metro Ethernet requirements at the industrial environment. When massive fiber ports need to be deployed, this managed switch series provide the best performance and price ratio.

1.1 Overview of the Managed Industrial PoE Gigabit Ethernet Switch

IPS-3106-SE(-PB), a Managed Industrial PoE Gigabit Ethernet Switch, has 4 x 10/100/1000Base-T up to 30W PoE ports and 2 x 100/1000Base-X SFP slots in the front panel. It is designed to meet the massive needs for Gigabit Ethernet network deployments and aim at industrial PoE applications that demand a wide range of operating temperature (-40°C ~ 75°C). This Managed Industrial PoE Switch also provides high performance, store and forward switching capability plus other advanced features such as QoS, VLAN, Spanning Tree, LACP and so on.

LED indicators located on the front panel ease the users' effort to monitor and manage the network status. The built-in management module allows users to configure, control and monitor the system locally via console or remotely via SNMP_ based management system.

In the harsh environment, this Managed Industrial PoE Gigabit Ethernet Switch is a reliable solution to the delivery of power over Ethernet for any network devices. With the power redundancy, users can prevent the network disconnection from the unexpected power outage. Besides, it can be used as a stand-alone switch. You can easily mount it with the provided DIN-rail at industrial sites as well.

1.2 Key Features

■ Interface

4 x 10/100/1000Mbps RJ-45, Max.30W PoE/PSE
2 x 100/1000Mbps SFP Slot
Console: 1 x RS-232 (RJ-45)

■ Standards

Support IEEE802.3 10Base-T
Support IEEE802.3u 100Base-TX/FX
Support IEEE802.3ab 1000Base-T
Support IEEE802.3az EEE
Support IEEE802.3z 1000Base-X
Support IEEE802.1p Priority
Support IEEE802.1q Tag VLAN
Support IEEE802.3x Flow Control
Support IEEE802.1D/IEEE802.1w STP/RSTP
Support IEEE802.3af Power over Ethernet
Support IEEE802.3at Power over Ethernet Enhancements
Support IEEE802.1x Authentication Network Access Control

■ H/W Specification

Store and Forward Switching Mechanism
Auto Crossover for MDI/MDI-X in TP Port
Auto Negotiation in TP Port
Support Auto-Sensing for fiber ports
Half/Full Duplex Mode Operation
Jumbo Frame up to : 9K Bytes
MAC Address Table : 8K
Non-Blocking Switching Fabric : 12Gbps
VLANs support up to 2K VLAN Groups
1x Digital Output for fault alarm notification (Power, Ports, Digital Input)
1x Digital Input (Dry Contact)
6KV Surge Immunity on RJ-45 Copper Port (K.21*)
Dual Power Input : 48~54 VDC (IPS-3106-SE)
24~54 VDC (IPS-3106-SE-PB)

■ Switching Features

Support IEEE802.1q Tag Based VLAN
Support IGMP v1/v2/v3 snooping
IGMP fast leave
IGMP filtering via filtering profile
Support QoS Based on P-bit
QoS classification based on IEEE802.1p, TOS/DSCP
802.1Q Tunneling (QinQ)
Support Strict Priority Queuing (SPQ)
Support Weighted Round Robin (WRR)

Support Port Trunking
CPU temperature alarm notification
L2PT (Layer 2 Protocol Tunneling)
VLAN Translation
Proprietary Fast Ring v2 (<50ms) and Chain (<1 second) redundancy protocols for fast redundancy after encountering connection issues

■ **Network Management**

Console
Telnet/CLI
Web
RADIUS authentication
SNMP v1/v2c/v3
DHCP Client
FTP/TFTP/HTTP/HTTPS Firmware Upgrade
Dual Image
SNTP
SSHv2
Eventlog
Syslog

■ **Operation Environment**

Operating Temperature: -40°C~75°C

1.3 Front & Rear & Top Panels

1.3.1 Front and Rear Panels

Figure 1-1. Front and Rear Panels of IPS-3106-SE-PB

The interfaces on the front and rear panels of the Managed Industrial PoE Gigabit Ethernet Switch are described below:

A. 4 x 10/100/1000Base-T RJ-45 Ports (Ports 1-4)

B. 2 x 100/1000Base-X SFP Ports (Ports 5-6)

C. Console Port (RJ-45 to RS-232) :

- An asynchronous serial console port supports the RS-232 electrical specification. The console port can be used to manage the device, and the serial console port settings should be configured as 9600, 8, n, 1.

D. Reset Button :

- Press the reset button for 5~10 seconds, then release it to restart the system.
- Press the reset button for more than 10 seconds, then release it to reset the Managed Switch. The settings will be back to the factory defaults and restart the system.

E. LEDs :

- Includes Power LEDs of P1 and P2, STA Status LED, ALM LED, COM LED, RM LED, Ring LED, Link/Act LEDs of 1~6 ports and PoE LEDs of 1~4 ports. For more details on LEDs description, please refer to [Section 1.4 LED Definitions](#).

F. Din-Rail Metal Spring (For more information, please refer to [Section 2.3.1](#))

1.3.2 Top Panel

Figure 1-2. Top Panel of IPS-3106-SE-PB

The interfaces on the top panel of the Managed Industrial PoE Gigabit Ethernet Switch are described below:

- G. Ground Screw** (For more information, please refer to [Section 2.3.2](#))
- H. Terminal Block for Power Supply** (For more information, please refer to [Section 2.4](#))
- I. Digital Input** (For more information, please refer to [Section 2.4](#))
- J. Digital Output for Relay Alarm** (For more information, please refer to [Section 2.4](#))

1.4 LED Definitions

The Managed Industrial PoE Gigabit Ethernet Switch is Plug & Play compliant. The real-time operational status can be monitored through a set of LED indicators located on the front panel.

Figure 1-3. LEDs of IPS-3106-SE-PB

LED	Color	Operation
P1 (Power)	OFF	Device is powered down or works abnormally.
	Green	Lit when this power is in normal operation.
P2 (Power)	OFF	Device is powered down or works abnormally.
	Green	Lit when this power is in normal operation.
STA (System Status)	Green	Lit when the system is working normally.
	Orange	Blinking when press the Reset button for more than 10 seconds and then release to reset (return to factory default settings) and restart the system. The LED indicator will blink in orange color for three times.
		Lit when the device is booting up or press the Reset button for 5~10 seconds and then release to restart the system.
ALM (Alarm)	OFF	One or redundant power supply is up since the system is booted up.
	Red	One of redundant power supply is down since the system is booted up.

Ring (Function)	OFF	Ring Detection is disabled.
	Green	Lit when Ring Detection works normally and no ring port is link down. Blinking when the ring port of another device is link down that results in abnormal Ring Detection.
	Orange	Blinking when the ring port of this Switch is link down that results in abnormal Ring Detection.
RM (Ring Master)	OFF	Off when the role of this Switch is Slave in case Ring Detection is enabled.
	Green	Lit when the role of this Switch is Master in case Ring Detection is enabled.
COM	OFF	Either the console port is not activated or no session exists.
	Green	Lit when the console port is activated and the session exists.
Link/ACT (1~4 Ports)	OFF	No connection exists.
	Orange	Lit when 10/100Mbps TP port link is up. Blinking when TP port is receiving and transmitting data at the speed of 10/100Mbps.
	Green	Lit when 1000Mbps TP port link is up. Blinking when TP port is receiving and transmitting data at the speed of 1000Mbps.
Link/ACT (5~6 Ports)	OFF	No connection exists.
	Orange	Lit when 100Mbps Fiber port link is up. Blinking when Fiber port is receiving and transmitting data at the speed of 100Mbps.
	Green	Lit when 1000Mbps Fiber port link is up. Blinking when Fiber port is receiving and transmitting data at the speed of 1000Mbps.
PoE (1~4 Ports)	OFF	PoE is disabled or no power is supplied with the PD when PoE is enabled.
	Green	Lit when PoE is enabled and starts supplying the power. (Note: Once PoE LED indicator that belongs to the specific PoE port without connecting any PD lights in green color, it stands that this PoE port is under the “Injector-30Watt” mode. It strongly recommends that please do not connect any network device (e.g. NIC) not supporting PoE function to this PoE port, since it may cause great damage to your network device. For more details on PoE operation mode settings, please refer to IPS-3106-SE(-PB) Network Management User’s Manual.)

1.5 Cable Specifications

The following table contains various cable specifications for the Managed Industrial PoE Gigabit Ethernet Switch. Please make sure that you use the proper cable when connecting the Switch.

Cable Type	Description
10Base-T	UTP Category 3, 4, 5 (100 meters max.) EIA/TIA- 568 150-ohm STP (100 meters max.)
100Base-TX	UTP Cat. 5 (100 meters max.) EIA/TIA-568 150-ohm STP (100 meters max.)
1000Base-T	UTP Cat. 5e (100 meters max.) UTP Cat. 5 (100 meters max.) EIA/TIA-568B 150-ohm STP (100 meters max.)
100BASE-FX	Multi-mode fiber module(2km) / Single-mode fiber module
1000BASE-SX	Multi-mode fiber module (550m)
1000BASE-LX	Single-mode fiber module (10km)
1000BASE-LH	Single-mode fiber module (30km/50km)
1000BASE-ZX	Single-mode fiber module (80km)
SFP Transceiver	SFP Transceiver for 1000BASE-SX Multi-mode fiber module (550m) SFP Transceiver for 1000BASE-LX Single-mode fiber module (10km) SFP Transceiver for 1000BASE-LH Single-mode fiber module (30km/50km) SFP Transceiver for 1000BASE-ZX Single-mode fiber module (80km)

2

Installation

To properly install IPS-3106-SE or IPS-3106-SE-PB Managed Industrial PoE Gigabit Ethernet Switch, please follow the procedures listed below. These procedures will be respectively described in detail in the following sections.

- Installation Requirements
- Checking the Package Contents
- Installing the Managed Industrial PoE Gigabit Ethernet Switch
- Powering on the Managed Industrial PoE Gigabit Ethernet Switch
- Connecting the Managed Industrial PoE Gigabit Ethernet Switch to the Network

2.1 Installation Requirements

ATTENTION

Be sure to power off before installing or wiring your Managed Industrial PoE Gigabit Ethernet Switch.

Be sure to calculate the maximum possible current in each power wire and common wire. If the current goes above the maximum ratings, the wiring could overheat, causing serious damage to your equipment.

Be sure to read and follow important guidelines as below:

- Do not run signal or communications wiring and power wiring through the same wire conduit. Wires with different signal characteristics should be routed separately to avoid interference.
- It is recommended that wiring which shares similar electrical characteristics can be bundled together.
- Keep input wiring and output wiring separate and label the wiring to all devices in the system if necessary.

2.2 Checking the Package Contents

Unpack the package carefully and check the package contents. The standard package should contain the following items:

- Managed Industrial PoE Gigabit Ethernet Switch x 1
- Quick Guide x 1
- DIN-Rail mounting bracket x 1 (locked on the Switch)

***Note:** If any of the above items is found missing or damaged, please contact your local sales representative for support or replacement.*

2.3 Installing the Managed Industrial PoE Gigabit Ethernet Switch

ATTENTION

This product is intended to be mounted to a well-grounded mounting surface, such as a metal panel.

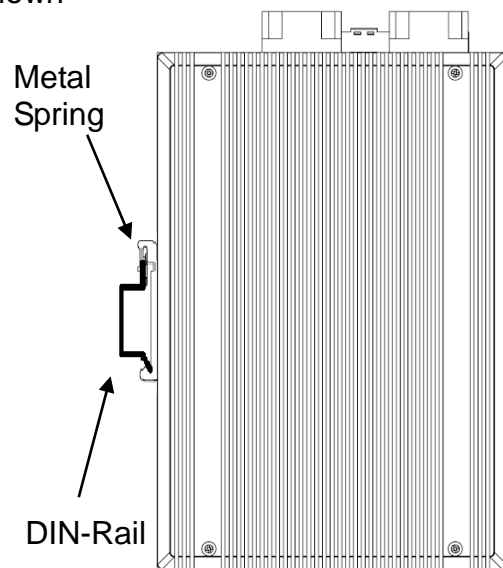

2.3.1 DIN-Rail Installation

Just follow the steps below to complete the DIN-Rail installation for your IPS-3106-SE or IPS-3106-SE-PB if needed.

STEP 1 : Insert the top of the DIN-Rail into the slot just below the metal spring

STEP 2 : The DIN-Rail attachment unit will be snapped into place as shown

2.3.2 Grounding the Managed Industrial PoE Gigabit Ethernet Switch

Grounding helps to limit the effects of noise due to electromagnetic interference (EMI). Be sure to install the ground connection from the ground screw to the grounding surface before connecting devices.

Figure 2-1 Grounding Wiring for IPS-3106-SE / IPS-3106-SE-PB

2.4 Powering the Managed Industrial PoE Gigabit Ethernet Switch

The IPS-3106-SE can be powered with DC power ranging from 48 to 54 VDC through the terminal block, while the IPS-3106-SE-PB can be powered with DC power ranging from 24 to 54 VDC through the terminal block. The terminal block is located on the upper panel of the switch. Before powering on the Managed Industrial PoE Gigabit Ethernet Switch, please ensure that network cables and power cables are securely connected.

ATTENTION

Before connecting the Managed Industrial PoE Gigabit Ethernet Switch to the DC power inputs, make sure the DC power source voltage is stable.

Wiring of the Terminal Block for Power Supply/Digital Output for Relay Alarm/Digital Input

- P1 and P2 (Power Inputs):** Two sets of power inputs are located on the terminal block. For power redundancy purpose, both the P1 and P2 need to be configured. The redundant power input will take over seamlessly when one power source is down to protect your device or network from the loss of power.

Power Input Configuration:

Loosen the wire-clamping screws by using a flat-head screwdriver to insert the positive and negative wires of 14 AWG at least we suggest into the “+” and “-” contacts on the terminal block respectively. P1 and P2 allow the power input that ranges from 48~54 VDC for IPS-3106-SE and 24~54 VDC for IPS-3106-SE-PB. Tighten the wire-clamping screws to fix wires of 14 AWG by using a flat-head screwdriver.

■ Digital Output for Relay Alarm Configuration:

A pair of contacts located on the Digital Output are used to connect alarm devices such as speakers or LEDs to alert users when the digital input alarm, the redundant power failure or any port-link failure occurs. For more details on these settings, please refer to IPS-3106-SE(-PB) Network Management User's Manual. The default contact is normal open, the capacity of relay alarm is 1A/30VDC.

Loosen/tighten the wire-clamping screws to insert/fix alarm-device wires by using a flat-head screwdriver as described above.

■ Digital Input (Dry Contact): A voltage-free connector that is used to decide whether the trigger occurs or not by detecting its open/close status. The configuration is as follows:

- Open: Logic Level 0
- Close: Logic Level 1

Digital Input Configuration:

A pair of contacts located on the Digital Input. Loosen the wire-clamping screws by using a flat-head screwdriver to insert the wires into the contacts on the Digital Input.

Tighten the wire-clamping screws to fix the wires by using a flat-head screwdriver as described above.

Note: *If there is no power redundancy, the relay alarm is not available.*

2.5 Connecting the Switch to Network

Connect to Network

This Managed Industrial PoE Gigabit Ethernet Switch has 2 100/1000Mbps SFP slots and 4 10/100/1000Mbps RJ-45 ports for you to implement it in your Industrial PoE environment. These 2 SFP slots can be plugged with 100Base-FX or 1000Base-X SFP Fiber transceiver. All RJ-45 ports can be plugged with 10/100/1000Base-T UTP cable. The connection of the fiber port must be matched, i.e. Transmitter to Receiver, and vice versa.

2.6 Installing and Removing SFP Modules

2.6.1 Installing SFP Modules

To connect the fiber transceiver and LC cable, please refer to the following guidelines:

1. Position the SFP transceiver with the handle on top.
2. Locate the triangular marking in the slot and align it with the bottom of the transceiver.
3. Insert the SFP transceiver into the slot until it clicks into place.
4. Make sure the module is seated correctly before sliding the module into the slot. A click sounds when it is locked in place.

Note: If you are attaching fiber optic cables to the transceiver, continue with the following step. Otherwise, repeat the previous steps to install the remaining SFP transceivers in the device.

1. Remove the protective plug from the SFP transceiver.

Note: Do not remove the dust plug from the transceiver if you are not installing the fiber optic cable at this time. The dust plug protects hardware from dust contamination.

2. Insert the fiber cable into the transceiver. The connector snaps into place and locks.
3. Repeat the previous procedures to install any additional SFP transceivers in the switch. The fiber port is now set up.

2.6.2 Removing SFP Modules

To disconnect an LC connector, please refer to the following guidelines:

1. Press down and hold the locking clips on the upper side of the optic cable.
2. Pull the optic cable out to release it from the transceiver.
3. Hold the handle on the transceiver and pull the transceiver out of the slot.

2.7 Connecting the Switch to Console Port

The industrial switch supports a secondary means of management. By connecting the RJ45 to RS232 serial cable between a COM port on your PC (9-pin D-sub female) and the switch's RJ45 (RJ45) port, a wired connection for management can be established.

3

Operation

A built-in management module of the Managed Industrial PoE Gigabit Ethernet Switch provides users flexible interfaces to configure, control and monitor the system remotely and locally. To know the further information about the operation of this switch, please refer to IPS-3106-SE(-PB) Network Management User's Manual for the detailed management functions and required installation and operation procedures.

3.1 Network Management

The following is a list of management options available on this Managed Industrial PoE Gigabit Ethernet Switch, the Managed Industrial PoE Gigabit Ethernet Switch will be refer to as “the network device” below:

- Local Console Management
- Telnet Management
- SNMP Management
- Web Management

Local Console Management

Users can establish a connection between a Terminal or PC running a Terminal Emulator program (such as Putty or Tera Term) and the network device by utilizing the RS-232 cable directly on the serial console port. This connection allows for system configuration, control, and monitoring. Commonly known as Out-Of-Band management, console management proves valuable in situations where there is no network connection to the network device, especially during the initial configuration of the network device.

Baud rate:	9600
Data bits:	8
Parity:	none
Stop bits:	1
Flow control:	none

Telnet Management

Upon establishing a network connection to the network device, users have the capability to employ Telnet for system configuration, control, and monitoring. This method of management via the network is commonly known as In-Band Management.

SNMP Management

SNMP, being another form of In-Band Management, necessitates a network connection to the network device. The private Management Information Bases (MIB) specific to the network device are made available for SNMP-based network management programs, enabling the configuration, control, and monitoring of the system.

Web Management

Upon the network device being accessible on the network, users can log in and remotely or locally monitor its status through a web browser. For local web management, particularly during the initial setup of the network device to configure the necessary IP, users can also utilize the RJ-45 ports situated on the front panel. To facilitate this management, a direct RJ-45 LAN cable connection between a PC and the network device are necessary.

4

Maintenance

This Managed Industrial PoE Gigabit Ethernet Switch is easy to maintain. The procedures are suggested when you would like to identify faults, perform hardware replacement and do the firmware upgrade.

4.1 Fault Identification

Identifying faults can greatly reduce the time required to find problem and solution. Users may perform local check or remote check to find the problems.

4.1.1 Local Check

Users can perform local check by observing LED indicators status or check system setup and configuration through console connection.

- When the whole system fails to function,
 1. Check Power LED status
 2. Check Power connection
 3. Reset power
- When certain network link fails to function,
 1. Locate the port of the switch
 2. Check LINK/ACT LED of the port
 3. Check Status LED of the port
 4. Check cable connection between the port and the connected device
 5. Reset power
- When local Console fails to function,
 1. Check COM LED status
 2. Check Console port connection
 3. Check Console configuration
 4. Reset power

4.1.2 Remote Check

Users may check the Managed Industrial PoE Gigabit Ethernet Switch through SNMP manager remotely. For detailed procedures, please refer to the Network Management User's Manual.

4.2 Hardware Replacement Procedures

WARNING!

The Managed Switch contains no user-serviceable parts. DO NOT, UNDER ANY CIRCUMSTANCES, open and attempt to repair it.

Failure to observe this warning could result in personal injury or death from electrical shock.

Failure to observe the above warning will immediately void any Warranty.

4.3 Firmware Upgrade

This Managed Industrial PoE Gigabit Ethernet Switch may perform the firmware upgrade when required. The latest firmware can be obtained from your sales representative. For the detailed upgrade procedures, please refer to the Network Management User's Manual.
